Econometrics (60 points) Question 7: Short Answers (30 points) Answer parts 1-6 with a brief explanation. 1. Suppose the model of interest is  $Y_i = \beta_0 + \beta_1 X_{1i} + \beta_2 X_{2i} + u_i$ , where  $E(u_i|X_i) = 0$  and  $E(u_i^2|X_i) = \sigma^2$  and  $X_1$  and  $X_2$  are uncorrelated in your sample. Will the bivariate regression of  $Y$  on  $X_i$  have the same coefficient estimate and standard ...

Econometrics - Exam 1 Exam Please discuss each problem on a separate sheet of paper, not just on a separate page! Problem 1: (20 points) A sample of data consists of  $n$  observations on two variables,  $Y$  and  $X$ . The true model is  $Y_i = \beta_1 + \beta_2 X_i + \varepsilon_i$ , (1.1) where  $\beta_1$  and  $\beta_2$  are parameters and  $\varepsilon$  is a disturbance term that satisfies the

## (With Video Solutions)

Econometrics-Exam 2 Solution: 1.

$\text{Var}[\hat{u}_j] = E[(\hat{u}_j)^2] = E \sum_{i=1}^n u_i^2$   
 $= \sum_{j=1}^n E[u_1^2 + u_2^2 + \dots + u_n^2]$  as all  
covariances are zero  $= \sum_{j=1}^n \sigma^2 = \sigma^2$   
The OLS estimator remains unbiased  
but it is inefficient and the stan-  
dard errors are invalid. 2. Multiply observation  
 $j$  by  $\sqrt{n_j}$ . The regression becomes  $\sqrt{n_j} \text{MRS}_{Aj} = \sqrt{n_j} \beta_1 + \sqrt{n_j} \beta_2 S_j + \sqrt{n_j} \beta_3 C_j +$

## Exam and Solution - Universität Innsbruck

As much as content on principles of  
econometrics is important, practicing  
problems, going through econometrics  
exam solutions, taking sample  
econometrics test, etc. are quite  
important. While different university  
professors post several exam questions  
on their web pages, they are customized  
to suit their respective universities and  
may not be optimal for every learner.
