The carburetor controls all these functions and generally does it quite well. The type of carburetor used on most 150cc GY6 type engines is a Keihin style CV carburetor with a 24mm throat. Keihin design carburetors are a well tried and tested design developed in Japan (Keihin is a region near Tokyo).

50cc or 150cc GY6 Scooter Carburetor Installation - YouTube

Here's a QT50 carburetor that I labeled. This carb is actually a knock-off carb but is pretty much an exact reproduction of the stock carb. Some of the older stock carbs have the pilot air screw on the left side of the throttle stop screw. I'll take a picture of the innards one of these days and label those parts as well.

JJ fom Wild Hogs Scooters shows you how to install your carburetor on your 50cc scooter.

50cc scooter carburetor install - YouTube

Carefully, take the carburetor apart. This can be relative easy (on a 50cc scooter). The carb has tiny passages that can get gummed up. Your scooter will not run correctly if the carburetor isn't completely clean, so take your time. I use a gallon container of carb dip (you can get a gallon at your local auto supply store).

2 Stroke Engine Running Animation Diagrams. As the 2 stroke engine animation below shows, a two-stroke engine in its purest form is extremely simple in construction and operation, as it only has three primary moving parts (the piston, connecting rod, and crankshaft). However, the two-stroke cycle can be difficult for some to visualize at first because certain phases of the cycle occur ...
