simple text formats.

Phosphate Buffer Solution

Phosphate-buffered saline is a buffer solution commonly used in biological research. It is a water-based salt solution containing disodium hydrogen phosphate, sodium chloride and, in some formulations, potassium chloride and potassium dihydrogen phosphate. The buffer

helps to maintain a constant pH. The osmolarity and ion concentrations of the solutions match those of the human body.

Phosphate-buffered saline - Wikipedia

The goal of a buffer solution is to help maintain a stable pH when a small amount of acid or base is introduced into a solution. A phosphate buffer solution is a

Pharmaceutical Guidelines

Preparing a Buffer Solution There are a couple of ways to prepare a buffer solution of a specific pH. In the first method, prepare a solution with an acid and its conjugate base by dissolving the acid form of the buffer in about 60% of the volume of water required to obtain the final solution volume.
