problems that require you to make two moves to find the value of the unknown variable. For example, using the equation $3x + 5 = 11$ we will need to perform two steps to find the value of x . The first step would be to get the constant values of the equation by themselves. In this case 5 and 11 are our constants.

3 Ways to Solve Two Step Algebraic Equations - wikiHow

In algebra, a quadratic equation (from the Latin quadratus for "square") is any equation that can be rearranged in standard form as $ax^2+bx+c=0$ where x represents an unknown, and a , b , and c represent known numbers, where $a \neq 0$. If $a = 0$, then the equation is linear, not quadratic, as there is
