Elastomeric pump devices have been described in clinical use since 1989[1]. The device is used to continuously or intermittently infuse therapeutic drugs including antimicrobial agents. This device uses an elasticated balloon reservoir which contracts to deliver the infusion at a constant rate over a set time period.

### **Evaluation of an elastomeric pump device for the ...**

An elastomeric pump (nominal flow rate: 2, 3, 5 mL/h, maximum fill volume of 300 mL) containing 0.1% bupivacaine with 1 µg/mL of fentanyl was loaded to 100 mL (33% of maximum fill volume) with the intention of providing about 30 h of analgesia postoperatively at a flow rate of 3 mL/h. Child was comfortable and maintaining vital parameters.

### **Elastomeric pumps: How cautious should we be?**

elastomeric “balloon” is not changing as expected). • The Infusor/Intermate is leaking. • Medication comes in contact with your skin: •Immediately wash the area with water and soap. Place the device in the plastic bag provided (or any other plastic bag) and return to your healthcare provider. • The elastomeric “balloon” has burst.
