The Marine Region's GIS Lab is a state-of-the-art GIS and Remote Sensing facility which specializes in coastal and marine applications. The staffs' expertise includes processing spatial data from a wide variety of Remote Sensing platforms, raster-based spatial analysis, data management, and map production.

Marine Region Geographic Information Systems (GIS)

Sections 23.1 - 23.5 introduce the typical fields of application of marine geographic information systems. It begins with the application and the conflicts of using the sea for, e.g., energy production and transport, versus environmental protection. Furthermore, the methodology of GIS-based analyses in the marine context and the special conditions ...

The qualities we are looking for : PhD in marine science (preferred) or equivalent engineering degree More than 5 year experience in operational oceanography and/or in the development of ocean services and applications. Good knowledge of the areas of benefits and user communities that require ocean information services.

GEO Blue Planet - Linking Ocean and Coastal Information ...

The number of marine ecosystems is actively debated. Although there is some disagreement, several types of marine ecosystems are largely agreed on: estuaries, salt marshes, mangrove forests, coral reefs, the open ocean, and the deep-sea ocean. An estuary is a coastal zone where oceans meets rivers.
