1 horsepower is equivalent to 746 watts. So if you took a 1-horsepower horse and put it on a treadmill, it could operate a generator producing a continuous 746 watts. 1 horsepower (over the course of an hour) is equivalent to 2,545 BTU (British thermal units).

## **How Horsepower Works | HowStuffWorks**

Lower-horsepower cars can even offer distinct performance advantages over their more-powerful competitors. A favorite example is the 155-horsepower Mazda MX-5 Miata. This affordable rear-wheel drive roadster has a modest engine for a sports car, but the reason it's fun to drive is because it's light and agile – it's not concerned with achieving the highest speed in a straight line.
