Furunculosis Multidisciplinary Fish Disease Research

Research on furunculosis of Salmonidae caused by *Aeromonas salmonicida* commenced in Germany over 100 years ago (Emmerich & Weibel 1894), and it is the purpose of this book to record the course of events since then. Although vaccines are now available, there are many aspects of the disease still awaiting a solution.

Furunculosis | Disease guide | The Fish Site

The first documented evidence of furunculosis was provided by Emmerich and Weibel in 1894. Emmerich and Weibel described that the “trout epizooty,” that is, “furunculosis,” was a bacterial disease. The bacterium is known as *Aeromonas salmonicida*. Furunculosis is only one of several clinical diseases associated with *A. salmonicida*.

Furunculosis Multidisciplinary Fish Disease Research [PDF]

Furunculosis, a disease caused with gram negative bacteria *Aeromonas salmonicida* produces heavy losses in aquaculture. Vaccination against furunculosis reduces mortality of Atlantic salmon but fails to eradicate infection. Factors that determine high individual variation of vaccination efficiency remain unknown.
