The object function untangles JavaScript's constructor pattern, achieving true prototypal inheritance. It takes an old object as a parameter and returns an empty new object that inherits from the old one. If we attempt to obtain a member from the new object, and it lacks that key, then the old object will supply the member.

JavaScript study guide. JavaScript is a disgusting language. But I love it! It's riddled with awful parts, was put together in 10 days, and now we have to suffer for the next 20 years (it turns 20 in a few months). However, it's also the duct tape of the internet, and it works just about anywhere that there is a browser.
