B-form DNA. The information from the base composition of DNA, the knowledge of dinucleotide structure, and the insight that the X-ray crystallography suggested a helical periodicity were combined by Watson and Crick in 1953 in their proposed model for a double helical structure for DNA.

Different forms of DNA- A form, B form, Z form. The right-handed double-helical Watson - Crick Model for B-form DNA is the most commonly known DNA structure. In addition to this classic structure, several other forms of DNA have been observed. The helical structure of DNA is thus variable and depends on the sequence as well as the environment.

Molecular genetics is a sub-discipline of genetics, a field within the biological sciences. Genes are units of heredity, instructions for inherited traits such as hair color, blood type, and predisposition to some diseases. Molecular genetics is concerned with the physical and chemical properties of these genes.

treatments that destroyed DNA eliminated the transforming activity (Figure 1.3). These experiments implied that the substance re-sponsible for genetic transformation was the DNA of the cell—hence that DNA is the genetic material. 4 Chapter 1 Introduction to Molecular Genetics and Genomics Living S cells Living R cells Heat-killed S cells ...

DNA. The vast majority of organisms encode their genes in long strands of DNA (deoxyribonucleic acid). DNA consists of a chain made from four types of nucleotide subunits, each composed of: a five-carbon sugar (2-deoxyribose), a phosphate group, and one of the four bases adenine, cytosine, guanine, and thymine.: 2.1 Two chains of DNA twist around each other to form a DNA double helix with the ...

Heredity - Heredity - Molecular genetics: The data accumulated by scientists of the early 20th century provided compelling evidence that chromosomes are the carriers of genes. But the nature of the genes themselves remained a mystery, as did the mechanism by which they exert their influence. Molecular genetics—the study of the structure and function of genes at the molecular level—provided ...
