Novel psychoactive substances are newly used designer drugs ("internet drugs", "research chemicals", "legal highs") potentially posing similar health risks to classic illicit substances. Chemically, many novel psychoactive substances can be classified as phenethylamines, amphetamines, synthetic cathinones, piperazines, pipradrols/piperidines, aminoindanes benzofurans, and tryptamines.

Swiss Medical Weekly - Novel psychoactive substances ...

Novel psychoactive substances (NPS; also known as new psychoactive substances or popularly, although erroneously, as 'legal highs') is the name given to drugs that are newly synthesised or newly available, and which do not fall under the control of United Nations Drug Conventions. These drugs exist as a result of advances in academic, industrial, and psychonautic chemistry and are used for many of the same reasons given for traditional illegal drugs such as cannabis, ecstasy, and heroin.
