The California prune industry has historically utilized just five rootstocks, Myrobalan 29C, Myrobalan seedling, Marianna 2624, Lovell peach and Marianna 40. The Prune Production Manual (UC ANR # 3507) has a very good chapter describing the traditional rootstock choices.

Selecting the Right Rootstock in California Prune Production

Prune away branches that don't bear good quality fruit. Your pomegranate will bear lots of fruit, but there may come a time when you have to pick-and-choose which branches to keep and which branches to prune. Cut the branches as close to collar as possible. The collar is the raised ring between the trunk and the branch.
